

HD MOTION PROJECT

Digital Transformation Services for Sustainable Mobility

Giacomo Mussino – CIM4.0

The EDIH Network is a community of tech experts dedicated to guiding Europe's businesses on their path to digital transformation.

- About **400 EDIH** addressing digital challenges in **all the industrial technology fields**.
- **48 dedicated only to Mobility**

<https://european-digital-innovation-hubs.ec.europa.eu/edih-catalogue>

Ministero delle Imprese
e del Made in Italy

GOALS

HD-MOTION – Hub for the Digital Mobility Transformation – was created with the ambition to encourage a rapid acceleration in the development of enabling technological solutions, in the field of innovation and digitalization of sustainable mobility and transport services.

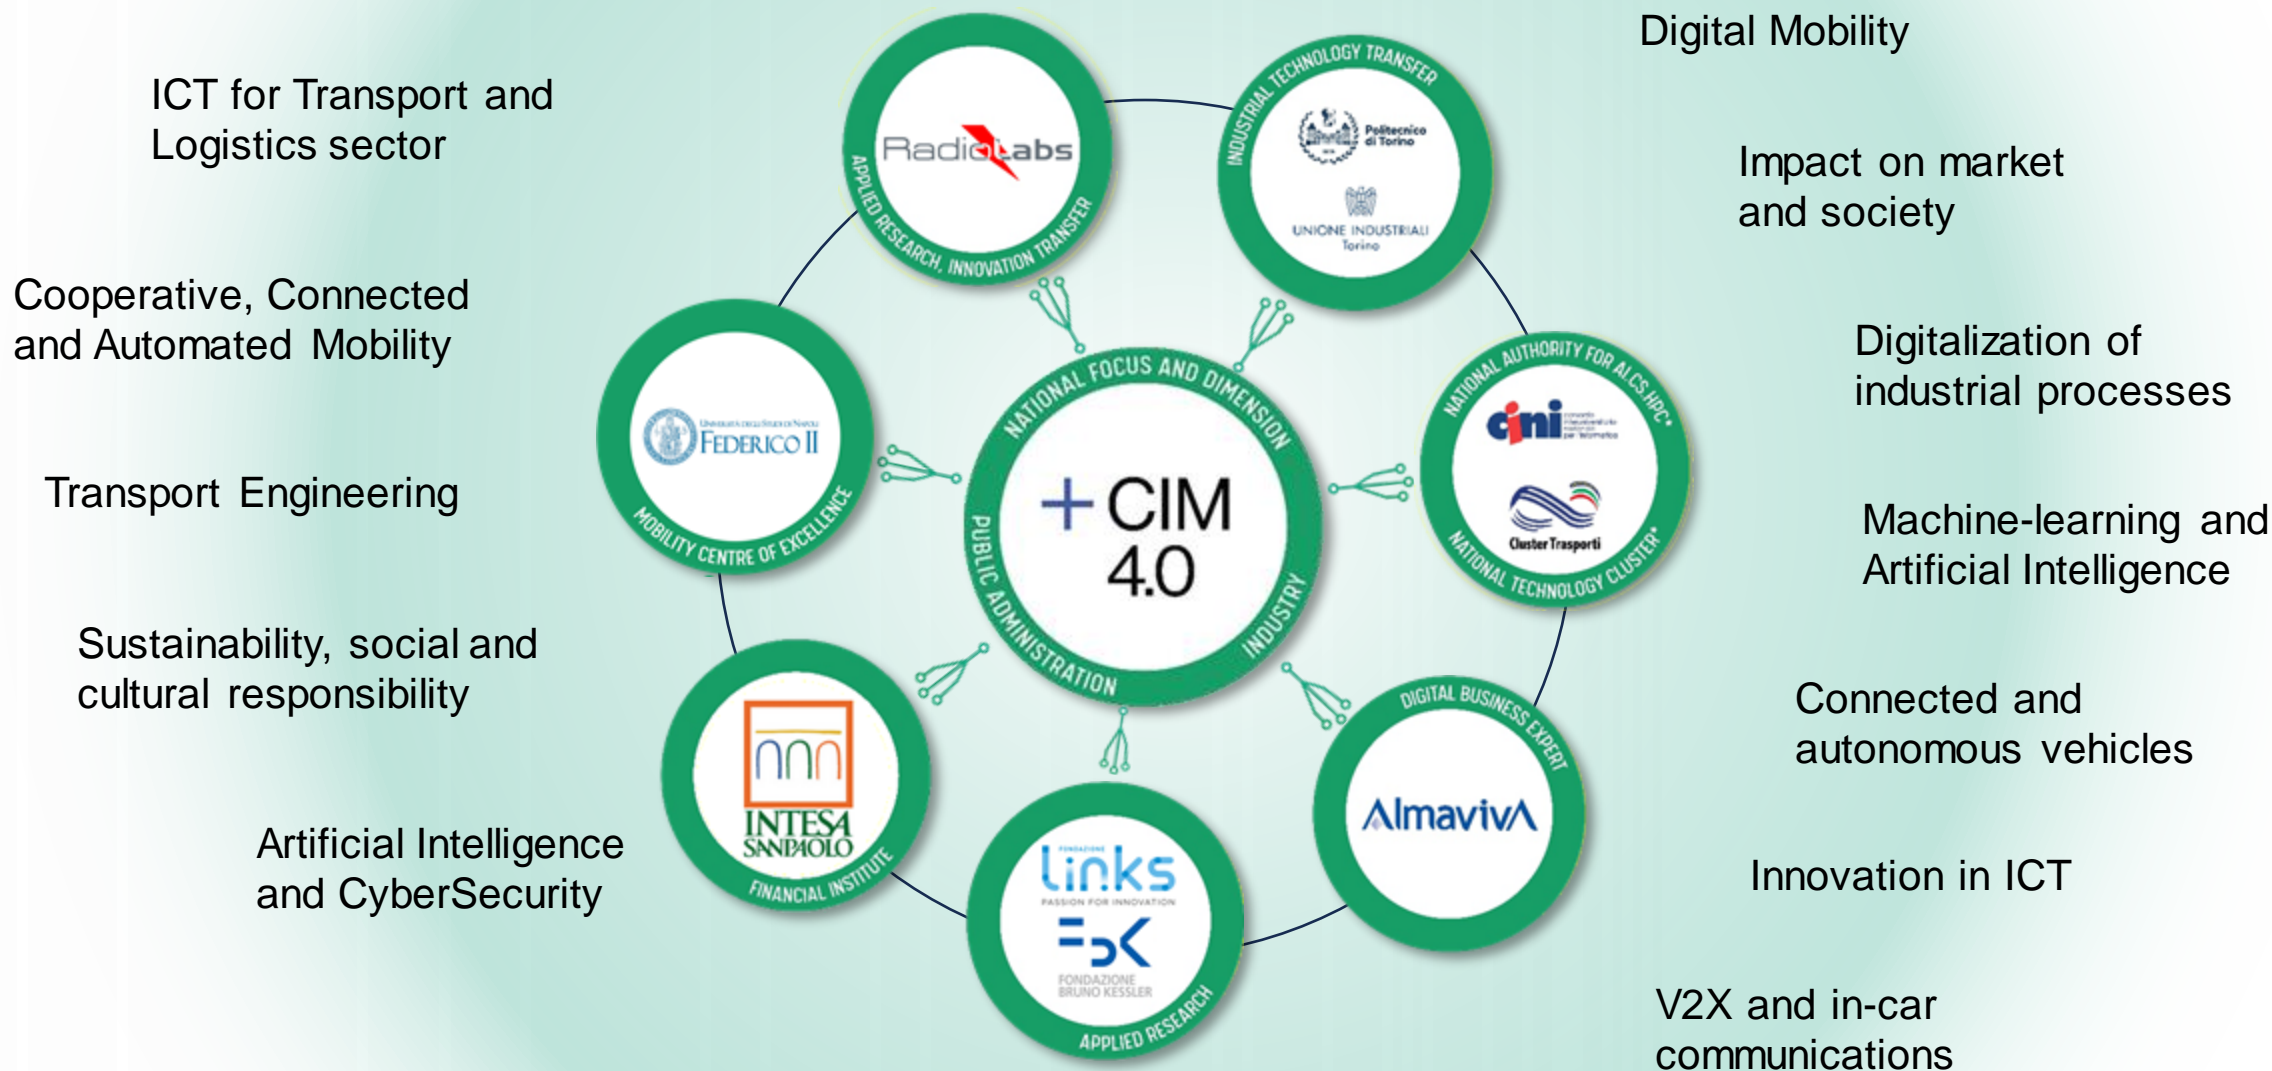

Strengthening the competitiveness of public sector organizations

Improving the competitiveness of private companies, the mobility supply chain and transport service providers

PARTNERS & KNOWLEDGE

ENABLING TECHNOLOGIES

-  New communication technologies (5G, 6G, C-V2X)
-  Internet of Things, sensors for infrastructure and vehicles
-  Distributed intelligence, cloud systems, fog, edge computing
-  Augmented Reality, Computer Vision
-  Simulation and Digital Twin of Vehicles and Systems

CORE TECHNOLOGIES

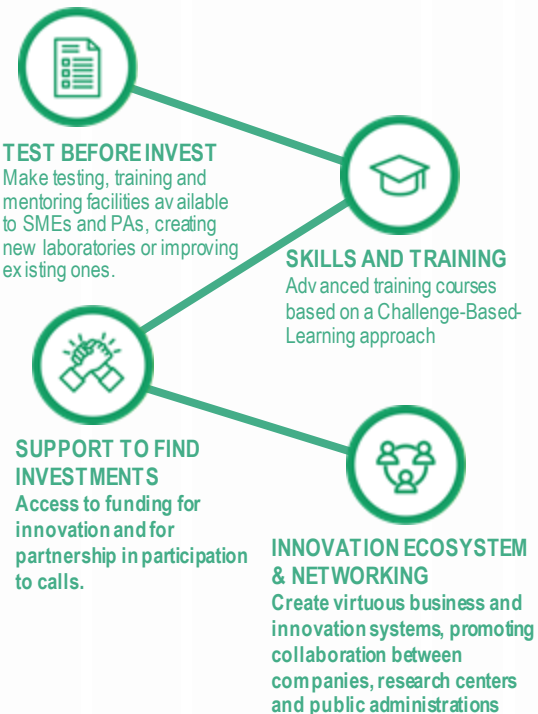

-  Artificial Intelligence (AI)
-  High-Performance Computing (HPC)
-  Cybersecurity (CS)

USERS

The **end-users** of HD Motion are **SMEs**, in particular those involved in technology transfer, the **Public Administration**, with its services (e.g. Public Transport) and citizens.

-  **Mobility Service Providers**
-  **Public transport companies**
-  **Logistic companies**
-  **Vehicle manufacturers**
-  **Public authorities (mobility planner)**

EXAMPLE - MOBILITY AS A SERVICE

Integration of different services and personal alternatives for mobility

Target alternatives

Bicycle - personal and shared

Electric scooter - shared

Vehicles - Shared, public, personal

Parking - standard and charging slots

Buses and tramways - urban transport

Buses and trains - extra urban transport

Technologies

Cloud data storage and integration

AI for mission definition

5G/fast communication

Final user expectations

Quick access to alternatives

Unique mobility services access

Simple mission and travel planning

Easy reservation, pricing and billing

Standard application for many cities

EXAMPLE - MOBILITY DATA

Road users helps in checking quality of the road for safety riding (potholes or uneven surface)

Target alternatives

Bicycle - personal and shared

Electric scooter - shared

Vehicles - Shared, public, personal

Technologies

Cloud data storage and integration

IOT “g”, speed and localization

IOT “g” sensors

PA expectations

Quick communication

Detailed position

Severity of the damage

Easy reservation, pricing and billing

Standard application for many cities
